Sriharsh Sai

Email: sriharsh1997@gmail.com | Phone: +1-647-528-6479

Summary

Software Engineer with experience in full-stack development across AI, healthcare, and enterprise sectors.

- **Specialized AI Expertise:** Architecting Retrieval-Augmented Generation (RAG) systems and deploying autonomous agents using OpenAI and Claude SDKs.
- **Cloud & Backend:** Skilled in developing server-side applications and microservices using **Node.js, PostgreSQL, MySQL, AWS Lambda, and Docker**.
- **Modern Frontend:** Expert in building performant user interfaces with **React, Next.js, and Tailwind CSS**.
- **Versatile Foundations:** Proficient in **C++, C#, and TypeScript** for diverse system requirements.

Experience

Software Engineer

SpinSci Technologies LLC | *January 2026 – Present*

- **Multi-EHR Interoperability & API Normalization:** Engineered and tested normalized backend API wrappers for Epic, Cerner, and Athenahealth using Python, FastAPI, TypeScript, and FHIR R4, utilizing Postman for rigorous API validation and seamless clinical data exchange.
- **Distributed Orchestration & Real-Time Telephony:** Architected reliable, asynchronous patient outreach workflows using Temporal and Redis, and integrated Zoom Phone and WebRTC services via Socket.IO for real-time contact center messaging.
- **Microservices Architecture & DevOps:** Containerized scalable health-tech microservices using Docker, built robust CI/CD pipelines in GitLab CI/CD, and developed local development environments to accelerate release cycles.
- **Enterprise Web Applications:** Built mission-critical healthcare user interfaces and backend services using React, TypeScript, and Node.js to streamline clinical operations and patient engagement.
- **Database Performance & Optimization:** Designed relational data schemas in PostgreSQL, optimizing complex queries and indexing to maintain high-performance data operations for enterprise software systems.
- **SpinSci Tech Stack:** Agentic AI Automation, Multi-EHR (Epic, Cerner, Athenahealth), FHIR R4, OpenAPI, Python, FastAPI, TypeScript, Node.js, React, PostgreSQL, Temporal, Redis, Socket.IO, Zoom Phone, Postman, Docker, GitLab CI/CD, Git.

Full Stack Developer

XceptAI | *November 2024 – January 2026*

- **Generative AI Engineering (OpenAI):** Engineered an intelligent, conversational SMS platform and Telegram bots using the **OpenAI SDK**, automating complex customer interactions with natural, context-aware responses.
- **Financial Analysis (Anthropic Claude):** Leveraged **Anthropic's Claude API** and its large context window capabilities to ingest, analyze, and summarize massive financial datasets into actionable forecasts.

- **RAG System Architecture:** Designed and deployed a **Retrieval-Augmented Generation (RAG)** pipeline using **PostgreSQL** and **pgvector**, enabling AI models to perform high-speed semantic search and reduce hallucinations.
- **Vector Database Implementation:** Built robust embedding pipelines to vectorise domain-specific knowledge bases, facilitating precise information retrieval for automated agents.
- **AI Agent Automation:** Developed autonomous AI agents capable of parsing natural language intent to execute real-time tools, including **Google Calendar** booking and **CRM** data entry.
- **Prompt Engineering & Context Logic:** Implemented advanced backend logic in **TypeScript** to manage conversation state, inject dynamic variables (e.g., weather data), and optimize system prompts for highly personalized user experiences.
- **AI Technical Stack:** OpenAI API, Anthropic Claude API, RAG, Vector Embeddings, PostgreSQL (pgvector), Natural Language Processing (NLP), Telegram API, TypeScript.

Software Developer

Digy4 | *Jul 2021 – Oct 2022*

- **Full-Stack Application Development:** Architected and deployed scalable CRM solutions leveraging **Node.js, Express, and MongoDB**, optimizing data flow and back-end logic to enhance user management workflows.
- **Automated Testing & Quality Assurance:** Built robust test automation frameworks using **TestNG and Selenium WebDriver**, integrating custom retry mechanisms to improve test stability and accelerate deployment reliability.
- **User Account Module Architecture:** Designed and implemented a secure, modern User Account Module utilizing **Next.js, TypeScript, and Chakra-UI** to deliver smooth end-to-end authentication experiences.
- **Dev Environment & Infrastructure Management:** Configured and maintained local and remote development pipelines using **WordPress, XAMPP, and FTP tools** to streamline staging and deployment routines.

Frontend Web Developer

Evolve Branding | *Apr 2020 – Jun 2021*

- **Responsive Front-End Development:** Engineered high-performance, responsive web interfaces using **React, Tailwind CSS, and Bootstrap** to deliver consistent and accessible user experiences across device ecosystems.
- **API Integration & Dynamic Content:** Integrated third-party services including the **Eventbrite API** to automate live event synchronization, dynamic listings, and data processing.
- **Full-Stack Collaboration:** Partnered in back-end system development using **Node.js, Express, and MongoDB** to build RESTful endpoints and support cohesive client-server data integration.

Education

Dalhousie University – Computer Engineering | *Sep 2015 – May 2019*

Skills

- **AI & Machine Learning:** Agentic AI Automation, Generative AI (OpenAI/Claude APIs), RAG Architecture, Vector Databases (pgvector), NLP, Autonomous Workflow Agents.

- **Languages & Frameworks:** Python, FastAPI, JavaScript (ES6+), TypeScript, C++, C#, React, Next.js, Node.js, Express.js, ASP.NET Core, FHIR R4, Multi-EHR Interoperability (Epic, Cerner, Athenahealth), OpenAPI Specs.
- **Cloud, DevOps & Tools:** AWS Lambda, Docker, Microservices, Temporal, Redis, Socket.IO, Zoom Phone Integration, GitLab CI/CD, Postman, RESTful APIs, Git.
- **Databases:** PostgreSQL, MySQL, Microsoft SQL, MongoDB.
